

Q.

## How to use the fonts installed on PC in EasyBuilder?

When using Windows® 10 64-bit to run EasyBuilder, certain fonts installed on PC may not be found in EasyBuilder. The possible reason is that the font's installation directory is not detected in EasyBuilder. When encountering this issue, please follow the steps in this FAQ to fix it.

A.

In the following demonstration, the font used is: HemiHeadRg-BoldItalic (hemi head bd it.ttf)

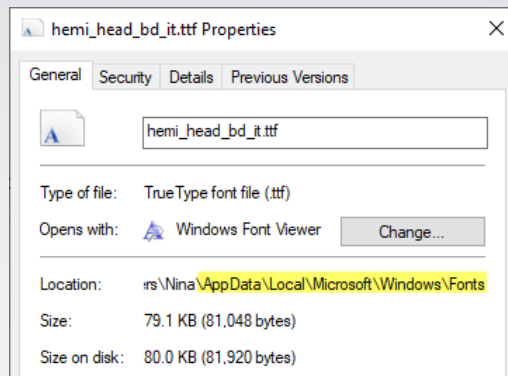

**Step 1.** Launch the Command Prompt in Windows and enter Regedit. Go to this directory to check whether the font file exist:

```
HKEY_LOCAL_MACHINE\SOFTWARE\MICROSOFT\Windows NT\
CurrentVersion\Fonts
```

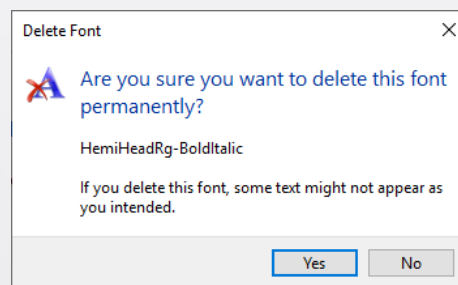

**Step 2.** If the font file does not exist, open File Manager and enter "C:\Window\Fonts" in the directory field. Or open [Control Panel] » [Fonts] and find the font file.

**Step 3.** Right click on the font file and open its properties to find its installation directory. As shown in the following figure, the font is installed under:

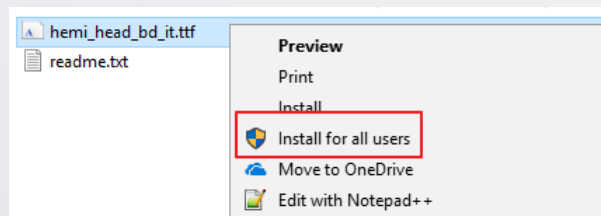

```
%userprofile%\AppData\Local\Microsoft\Windows\Fonts
```

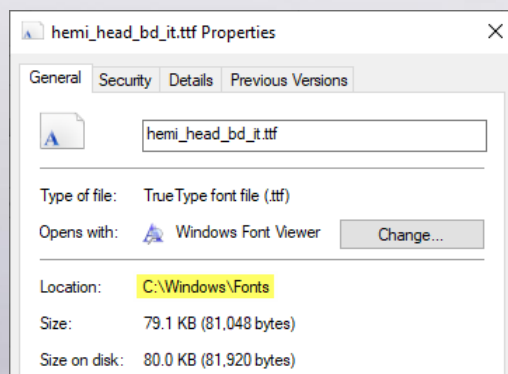

**Step 4.** Right click on the font file and then select [Delete] to delete it.

**Step 5.** Install the font file again, find it, right click, and select [Install for all users].

**Step 6.** Do step 2 again, open File Manager and check the directory.

**Step 7.** Restart EasyBuilder, the font can now be used.
